

Try Coding. Unlock your potential.

Experience not required.

Changing careers can be scary.

That's why we created **Try Coding**, workshops that helps you decide whether coding is the right fit for you. Classes are designed for the absolute beginner. You just need to turn on your computer, connect via Zoom and our staff of Turing School instructors will help you do the rest.

Discover your passion for programming.

We have various Try Coding workshops to help you discover if you could have a passion for programming. You can explore Back-End or Front-End programming, or join us for our newest event, Try Coding Data Analytics, where you'll learn how to use numbers to tell a story. Whether you attend one or multiple events, you'll leave each Try Coding with a better understanding of the skills needed to get a high-paying job in the tech industry.

It's all about jobs.

We've trained over 1,200 students in Back-End and Front-End Engineering that now work in over 450 companies in various cities around the country. With over 500,000 open tech jobs, learning programming is the best way to get into a high-fulfillment career, in a growing industry.

Join us for a free Exploring Pathways in Tech panel discussion and Q&A featuring Turing School Alumni on Friday, July 23. **Sign up here.**
